

Pisonet Timer System

Staff & Admin User Manual

A simple, step-by-step guide for running your computer shop — managing customers, time, payments, and the computers themselves.

For: Shop owners & counter staff
Covers: Admin Portal (phone / computer) & Customer PC App
No technical knowledge needed

What's inside

1. **Getting Started**

   What the system is · The two apps · Words you'll see

2. **Part A — The Admin Portal**

   Opening it · Logging in · Dashboard · Users · Computers · Transactions · Reports · Loyalty · Audit log · Admins

3. **Part B — The Customer PC App**

   What customers see · Logging in · Creating an account · The timer · Minimizing · Logging out · When time runs out

4. **Everyday Tasks (Quick Recipes)**

   The most common things you'll do each day

5. **Loyalty Stamps Explained**

6. **Setting Up a New Computer**

7. **Troubleshooting & FAQ**

ℹ️ This manual was made to be printed. Keep it near the counter so any staff member can follow it.

1. Getting Started

What is the Pisonet Timer System?

It is a system that controls how much time each customer can use a computer, based on money they have paid. Time is tied to the **customer's account**, not to a specific computer — so a customer can log in on any PC and use their remaining time.

The two apps you will use

App	Who uses it	What it's for
Admin Portal	You (owner / staff)	Open on your **phone or any computer's web browser**. Create customers, add time, see money earned, control the PCs.
Customer PC App	Customers	Runs on each **shop computer**. Customers log in here to start their time. It locks the PC when time runs out.

Words you'll see (plain English)

Word	What it means
Balance / Time	How much computer time a customer has left.
Top-up	Adding time to a customer after they pay.
Session	A customer being logged in and using a PC right now.
Stamp	A loyalty reward. Pay ₱12 in one go = 1 stamp.
Online	The customer is currently logged in and playing.
Disabled	An account that is turned off and cannot log in.

✅ The golden rule of pricing: **₱1 = 5 minutes.** So ₱12 = 60 minutes = 1 hour.

2. Part A — The Admin Portal

Opening the Admin Portal

1. On your phone or computer, open a web browser (Chrome, Safari, etc.).
2. Go to this address:
   `https://pisonet-timer-api.onrender.com/admin/`
3. Type your **email** and **password**, then tap **Log in**.

✅ **Make it feel like an app on your phone.** In Chrome (Android): tap the ⋮ menu → *Add to Home screen*. On iPhone (Safari): tap **Share** → *Add to Home Screen*. Now it opens with one tap, just like a real app.

ℹ️ The first time you open it after the shop has been quiet, it may take up to a minute to wake up. This is normal. Just wait — it will load.

Finding your way around

On a computer, the menu is on the **left side**. On a phone, tap `≡ Menu` at the top to open it. The menu items are:

Menu item	What you do there
Dashboard	See who's playing right now and today's earnings at a glance.
Users	Create customers, add/remove time, reset passwords, redeem rewards.
Computers	See each PC, lock it, shut it down, or set up a new one.
Transactions	A list of every top-up and time change.
Reports	End-of-day summary you can print or save.
Loyalty	Report of stamps earned and free hours redeemed.
Audit log	A history of staff actions (who did what).
Admins	Add more staff/admin logins.

Dashboard

This is your home screen. It shows:

- **Active sessions** — how many customers are playing now.
- **Computers in use** and how many are online.
- **Revenue today** — money earned today.
- **A live list** of who is playing, on which PC, and their time left (the timer counts down on screen).

From the live list you can quickly **+ Time** (top-up), **– Time** (remove time), or **Lock** a computer.

Users — your customers

This is where you'll spend most of your time. Each customer is one row.

Create a new customer

1. Tap **New user** (top right).
2. Fill in:
   - **Username** — what they log in with (letters/numbers, no spaces).
   - **Nickname** (optional) — a friendly name, e.g. "Juan."
   - **Password** — at least 6 characters.
   - **PIN** — optional, you can leave it blank.
   - **Mobile number** — optional.
   - **Starting time** — optional, in minutes.
3. Tap **Save**.

✅ Customers can also create their **own** account right on the computer's login screen. You then just add their time after they pay.

Add time (top-up) after a customer pays

1. Find the customer (use the **Search** box if needed).
2. Tap **+ Time**.
3. Enter how many **pesos** they paid (remember ₱1 = 5 minutes). You can also tap a quick button: ₱1, ₱5, ₱10, **₱12 · 1 stamp**, ₱20, ₱50.
4. Choose the payment method (Cash, GCash, etc.).
5. Tap **Save**.

ℹ️ You can add time even while the customer is **playing** — their on-screen timer goes up immediately.

Remove time (fix a mistake)

If you accidentally added too much, tap **– Time**, enter the minutes to remove, and confirm. (Balance never goes below zero.)

Reset a forgotten password

1. Tap **Reset PW** on the customer's row and confirm.
2. A short **temporary password** appears on screen — give it to the customer.
3. The customer logs in with it, then changes it to their own using **Change password** in the PC app.

⚠️ The temporary password is shown **only once**, and the customer's old password stops working. Copy it before closing the box.

Other things on a customer's row

Button	What it does
+ Time	Add time after payment.
– Time	Remove time (fix an error).
Redeem	Trade 5 stamps for 1 free hour (only shows when they have enough).
Edit	Change username, nickname, password, PIN, mobile, or status.
Reset PW	Give a temporary password.
Disable / Enable	Turn an account off or back on.

The Balance column (live)

If a customer is **online**, the balance shows a **live countdown** with a green dot — it ticks down as they play. If they are offline, it shows their saved wallet time.

Showing or hiding disabled customers

By default the list shows **Active only**. Use the dropdown next to Search to switch to **Disabled only** or **All statuses**.

Computers

Each shop PC appears here with a colored status:

Status	Meaning
ONLINE	On and ready, no one logged in.
IN USE	A customer is playing.
OFFLINE	The PC is off or has no internet.
MAINTENANCE	Unlocked for repairs (no paid time used).

Buttons on each computer:

- **Pair** — get a code to set up the PC app (see Section 6).
- **Lock** — log out the customer (their time is saved) and lock the PC.
- **Shut down** — turn the PC off remotely.
- **Maintenance** — unlock the PC for cleaning/repairs without using paid time.

Transactions, Reports & Loyalty

- **Transactions** — every top-up and time change, with totals.
- **Reports** — pick a date to see that day's money and usage. Tap **Export CSV** (open in Excel) or **Print / Save PDF**.
- **Loyalty** — see stamps earned and free hours given out over a date range.

Audit log & Admins

- **Audit log** — shows who did what (top-ups, resets, locks, etc.). Useful for checking staff activity.
- **Admins** — add another staff login. Tap **New admin**, enter an email and password.

3. Part B — The Customer PC App

This app runs on every shop computer. It fills the whole screen and keeps the PC locked until a customer with time logs in.

What a customer does to start

1. On the locked screen, type **Username** and **Password**.
2. Tap **Start session**.
3. The timer starts and they can use the computer.

ℹ️ A customer needs **time on their account** to log in. If they have ₱0 / 0 minutes, they must pay and get a top-up first.

Creating an account at the PC

New customers can tap **Create an account** on the login screen, enter a username, nickname (optional), and password, then tap **Create account**. After that, they pay and you add their time from the Admin Portal.

The timer while playing

- The remaining time is shown on screen.
- **Minimize** — shrinks the timer into a small floating clock in the corner so they can use the whole screen. They can drag it around.
- **Logout & save time** — ends the session and **saves** any unused time back to their account for next time.
- **Change password** — lets them set a new password (useful after a reset).

When time runs out

The customer is automatically logged out and the PC locks. Any unused time is already saved. They simply pay for more and log in again.

⚠️ If **no one** is logged in, the PC shows a 60-second countdown and then **shuts down by itself** to save power. This is normal.

For staff: opening the PC for repairs

To use a locked computer for cleaning or updates without paying:

> 1. Press `Ctrl + Alt + Shift + M` on the keyboard.
> 2. Type the **maintenance code** you set when the PC was paired.

You can also start/stop maintenance from the Admin Portal → **Computers**.

4. Everyday Tasks (Quick Recipes)

💵 A customer pays for time

> Admin Portal → **Users** → find them → **+ Time** → enter pesos → **Save**.

🆕 A brand-new customer

> Easiest: have them tap **Create an account** on the PC. Then Admin Portal → **Users** → **+ Time** after they pay.
> Or create them yourself with **New user**.

🔑 A customer forgot their password

> Admin Portal → **Users** → **Reset PW** → give them the temporary password → they log in and set a new one.

🎁 A customer wants to use their free hour

> Admin Portal → **Users** → if they have 5+ stamps, tap **Redeem** (gives 1 free hour at a time).

🔒 Free up or stop a computer

> Admin Portal → **Computers** → **Lock** (logs the customer out, saves time) or **Shut down**.

📊 Closing the shop / end of day

> Admin Portal → **Reports** → pick today → review totals → **Print / Save PDF** for your records.

🛠️ Need to fix or clean a PC

> At the PC press `Ctrl + Alt + Shift + M` and enter the maintenance code.

5. Loyalty Stamps Explained

The loyalty program rewards regular customers with free time.

Rule	Details
Earning a stamp	A customer earns **1 stamp** for every **₱12 paid in a single top-up** (that's 1 hour). Paying ₱24 at once = 2 stamps.
No partial stamps	Smaller payments (like ₱6) do **not** build toward a stamp. Only a full ₱12 in one payment counts.
Redeeming	**5 stamps = 1 free hour.** You redeem it for them in Admin Portal → Users → **Redeem**.
Stacking	Free hours can stack. If they have 10 stamps, that's 2 free hours — but you redeem **one hour at a time**.
Points	Each free hour redeemed also gives the customer **1 point**, a lifetime count of how many free hours they've claimed (handy for monthly bonuses).

✅ When taking a ₱12 payment, use the **₱12 · 1 stamp** quick button so the stamp is given correctly.

Customers can see their current stamps on the computer screen after logging in.

6. Setting Up a New Computer

Do this once per physical PC. It links the computer to your system.

Step 1 — Register it (Admin Portal)

1. Admin Portal → **Computers** → **Register PC**.
2. Enter a **Computer code** (e.g. `PC02`) and a display name.
3. Tap **Register**. A short **pairing code** appears (like `7K2-Q9F`).

ℹ️ The pairing code lasts **15 minutes** and can be used once. If it expires, tap **Pair** on that PC's card for a new one.

Step 2 — Enter the code on the PC

1. Open the **Pisonet Timer** app on the new PC.
2. On the **Quick pair** tab, the server address is already filled in.
3. Type the **pairing code** and a **maintenance code** (a secret word/number for staff repairs).
4. Tap **Save & connect**.

The PC connects and shows the login screen. It's ready for customers.

✅ Repeat for each PC, using a different computer code each time (PC02, PC03, …).

7. Troubleshooting & FAQ

Problem	What to do
The Admin Portal is slow or blank when I first open it.	The server was asleep. Wait up to a minute — it wakes up and loads automatically.
A customer can't log in ("Insufficient balance").	They have no time. Take payment and add time with **+ Time**.
A customer says "account already in use."	They're still logged in on another PC. Lock that PC (Computers → Lock) or have them log out there first.
A customer forgot their password.	Users → **Reset PW**, give them the temporary password.
A PC shows **OFFLINE** in the portal.	Check that the PC is on and connected to the internet. It comes back automatically.
I need to use a locked PC for maintenance.	Press `Ctrl + Alt + Shift + M` and enter the maintenance code.
The pairing code didn't work.	Codes expire after 15 minutes. Tap **Pair** on the PC's card for a fresh one.
I added the wrong amount of time.	Use **– Time** on the customer's row to remove minutes.
I can't find a customer in the list.	They may be disabled. Change the status dropdown to **All statuses**.
A PC shut itself down.	Normal — an idle PC with no one logged in powers off after 60 seconds. Turn it back on.

Daily checklist

- □ Open the Admin Portal and check the Dashboard.
- □ Make sure all PCs show ONLINE.
- □ Take payments → add time promptly.
- □ Give stamps using the ₱12 button when relevant.
- □ At closing, save the day's Report.
